

Claims

- 5 1. An aseptic package enclosing an intravaginal article, the package being made of a laminate comprising, from the interior side to the exterior side, a layer of a sealable material, a barrier layer, and a damage protective layer, wherein the package comprises means for reclosing it after opening, said means being in the form of a strip of polymeric material.
2. A package according to claim 1, characterised in that the sealable material is a heat-sealable polymer.
- 15 3. A package according to claim 1 or 2, characterised in that the barrier layer is a metal foil.
4. A package according claims 2 and 3, characterised in that the heat-sealable polymer is polyethylene, the metal foil is aluminium, and the damage protective layer is a polyester film.
- 20 5. The use of a sachet made of a polyethylene - aluminium foil laminate and comprising a plastic rib-and-groove reclosing means, for the aseptic packaging of an intravaginal article, the laminate being provided with a polyester outer layer.
- 25 6. A use according to claim 5, characterized in that the laminate comprises a low-density polyethylene inner layer of 35-45 μm , an aluminium foil barrier layer of 8-10 μm , and a PET protective outer layer of 10-14 μm .
